

AI/ML Intern Assessment Task

Objective

The purpose of this assignment is not to test your coding skills alone.

We want to understand:

- How you approach an unfamiliar problem
- How effectively you use modern AI tools
- Your reasoning and decision-making process
- Your ability to independently learn and execute
- Your ability to deliver practical solutions instead of just identifying problems

You are encouraged to use any AI tools, frameworks, libraries, or resources available to you.

Examples:

- Cursor
 - Windsurf
 - Claude
 - ChatGPT
 - Gemini
 - Hugging Face
 - ComfyUI
 - Open-source models
 - Agent frameworks
-

Task

Build an AI-Powered Research & Recommendation Agent

Create a system that takes the name of a company as input and generates a structured intelligence report.

Example Input

- Adani Realty
- Sobha

- Prestige Group
 - Brigade Group
 - Puravankara
 - Any other company
-

The System Should Generate

1. Company Overview

Provide a concise summary of:

- What the company does
 - Industry
 - Scale
 - Geographic presence
-

2. Key Business Information

Identify:

- Major offerings
 - Recent developments
 - Expansion plans
 - Important public information
-

3. Potential Business Challenges

Based on your research and reasoning, identify:

- Possible challenges
- Operational bottlenecks
- Sales challenges
- Customer experience challenges

Explain your reasoning.

4. AI Opportunities

Suggest where AI can help the company.

Examples:

- Automation
- Customer engagement
- Sales
- Operations
- Analytics
- Document processing

Do not give generic answers.

Provide company-specific suggestions.

5. Personalized Pitch

Assume you are meeting the CEO of the company.

Create a one-page personalized pitch explaining:

- Why you reached out
 - What opportunities you identified
 - What AI solutions you would recommend
-

Deliverables

Submit:

Working Application

Can be:

- Web application
 - Streamlit application
 - Desktop application
 - CLI tool
-

Documentation

Include:

1. Approach
2. Architecture
3. AI tools used
4. Challenges faced

5. How challenges were solved

Demo Video

5–10 minutes.

Walk through:

- Product
 - Workflow
 - Reasoning
 - Decisions made
-

Evaluation Criteria

Criteria	Weightage
Problem Solving & Reasoning	30%
Quality of Research	20%
Practicality of Recommendations	20%
AI Tool Usage	15%
Product Quality	10%
Documentation & Communication	5%

Important Note

We are not looking for perfect code.

We are looking for people who:

- Learn quickly
- Think independently
- Use AI effectively
- Break down problems
- Take ownership
- Deliver practical outcomes

A working solution with strong reasoning will score significantly higher than a polished solution with weak thinking.
